Application/Control Number: 09/362,635

Art Unit: 2665

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

2. Claims 11, 13, 14, 16-29 are rejected under 35 U.S.C. 103(a) as being unpatentable over YANO in U.S. Patent No. 4,516,272 (of record).

By taking the number of "W" equals to 2, and the number "i" equals to either 0 or 1, YANO discloses a star network having a hub node (N4) and a plurality of spoke nodes (N1-N3, N5 and N6) and a plurality of multichannel multiplexed links, each having even number of channels for interconnecting the nodes to one another (see abstract, col. 2, line 50 to col. 3, line 50, col. 6, lines 7-61) as in claims 11, 13, 14, 16-29.

Although YANO fails to specifically disclose the feature of dividing the even number W of channels in each link into two sets when W is greater or equal to 4 and I is greater or equal to 2, providing a star network configuration such that channel i on any link may be connected to channel w(i) on any other links, where w(i) = i + W/2, which is a simple network configuration

... Application/Control Number: 09/362,635

Art Unit: 2665

algorithm and well known in the art, which can be easily adopted by one of ordinary skill in the art into the network of YANO to provide a specific network configuration as needed to satisfy the requirement from the users.

- 3. Claims 30 and 31 are allowed.
- 4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Tseng and Dormer et al. are additionally cited to show the feature of star type optical communication network comprising hub node and spoke nodes similar to the claimed invention.

Yamamoto et al. is further cited to show the feature of a loop-shaped network with a plurality of nodes connected to one another using a plurality of multiplexed channels similar to the claimed invention.

5. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Application/Control Number: 09/362,635

Art Unit: 2665

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Alpus H. Hsu whose telephone number is (703)305-4377. The

examiner can normally be reached on M-F (5:30-3:00) First Friday Off.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Huy D. Vu can be reached on (703)308-6602. The fax phone numbers for the organization where this application or proceeding is assigned are (703)872-9314 for regular communications and (703)872-9314 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703)305-4700.
